Detecting growth hormone variants (dH), useful in screening patient for growth hormone tregularities, comprises comparing the nucleotide sequence of a GHI gene from a test sample with that of a standard sequence of the human GHI.

Disclosure; Fig 7; 95pp; English

The invention described a method of electrical voltation in growth hormone (cd) (ed); and therefore of deprinction in an individual; The method comprises comparing the nucleoids sequence of GHI gene obtained from the variation (ed) variation. The method is the electrical variation (ed) variation, the standard is even electrical variation (ed) variation. The standard is even electrical variation for the variation of producing variating protein for treating growth hormone irregularities or producing variating protein for treating the variation of

Constructing a synthetic polymuclactide, useful for producing a spolypoptide at a higher lared in a more an overveil, comprises selecting a first codon of the parent polymuclactide for replacement with

```
synonymous codon
```

Example 3; Fig 3; 82pp; English

The specification describes a mainded day constructing a symitetic polymonia that from which a polymonia day constructing a syminal to the united seems in a Chinese America Oray, (CRO) call compared to when united as salecting a time code on other than the same polymonia. The method comprises a personal codes, where the promonous codes is not created a censult with the late first codes of the symmetry codes is not created a censult with the late first codes of the code
